

Species name: **Pulsatilla grandis**
Annex: **II, IV**

Species group: **Plants**
Regions: **ALP CON PAN**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

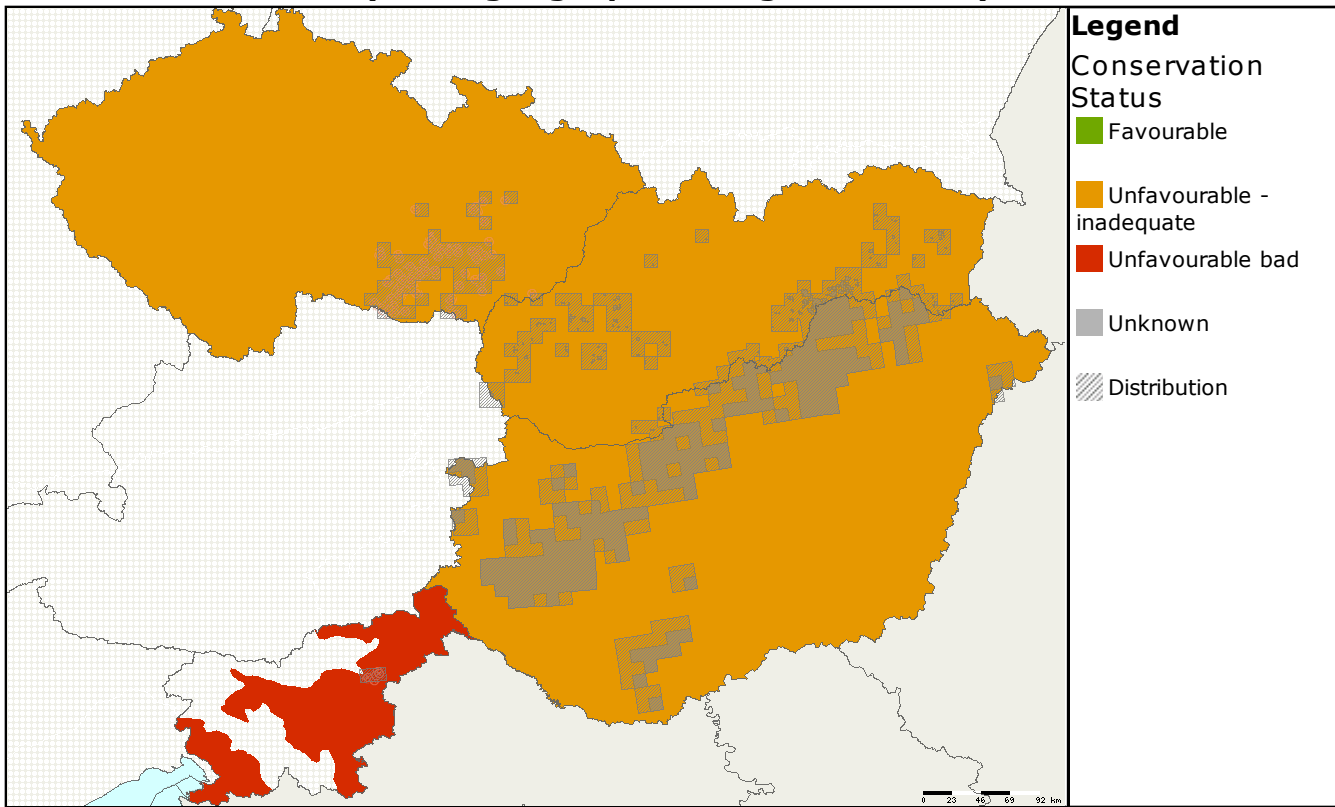

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP							-
EU25	CON						134 loc.	=
EU25	PAN						350 grids	=

The *Pulsatilla grandis* is a plant which occurs in the southern parts of Central Europe. It grows on steppe grasslands, sunny meadows, grassy slopes and limestone soils.

In all geographical regions (Alpine, Continental and Pannonian) this plant is recorded, its status is assessed as 'inadequate'. However, in many countries the range and population have been assessed as being 'favourable'. Data of the habitat quality are reported as 'unknown' or 'inadequate and deteriorating'. Outdoor leisure activities as well as changing agricultural practices are major threats to this species. Despite these threats, its overall population seems to increase a little bit which might be due to the protected status it has in some countries.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
SK	ALP						50000 - 500000 x	-	2
CZ	CON						130 - 130 loc.	-	1
SI	CON						4 - (4) loc.	-	1
CZ	PAN						70 - 70 loc.	-	1
HU	PAN						4000000 - 5500000 indiv.	=	2
SK	PAN						10000 - 100000 x	-	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
