IMPORTANT NOTE

This QA/QC report is provided for information only. No additional delivery is required from the Member State. The reporting envelope is now closed and you are not able to upload any files.

However, National Data Coordinators are invited to use the Article 17 Consultation Tool to review the national data. The review process allows you to draw attention to new information or to significant errors in the Article 17 report. In doing so, the EU biogeographical assessments will be more accurate.

Please consult the background paper and user manual available at http://circa.europa.eu/Public/irc/env/monnat/library?l=/habitats_reporting/reporting_2001-2007/internet_consultation&vm=detailed&sb=Title to see how you can correct possible errors using the web tool (<http://biodiversity.eionet.europa.eu/article17>)

GENERAL ISSUES -

General issues related to the report

A large number of the grids supplied for the spatial data did not fit perfectly with each other but often overlapped by approximately 100 metres. This appears to be due to different datum's being used in the creation of the different shapefiles. This resulted in additional processing time for the report and created added complexity to the data analysis process.

GENERAL REPORT - Data not compliant with QA/QC procedures

2. State of designation of Natura 2000

Issue 20

- The number of sites of community importance in the MED biogeographical regions provided in the general report (1263) does not match the number of sites in the latest Natura 2000 database (1264) received from the European Commission prior to 31/12/2006.
A value of zero was given as to the number of SACs and area of SACs. This will be interpreted that no (0) SACs have been designated to date.

3.1 Management tools - Art. 6(1) - Management plans and Management bodies

Issue 31

- The value indicating the number of sites for which management plans have been adopted (132) is not equal to the number of sites listed in the table (137). The value indicating the number of sites with management plan in preparation (597) is not equal to the number of sites listed in the table (598). The value indicating the number of sites with management bodies (213) is not equal to the number of sites listed in the table (214).

3.2 Management tools - Art. 6(1) - Other territorial planning instruments

Issue 32

- The value indicating the number of sites for which nature conservation objectives have been included in relevant territorial planning instrument (364) is not equal to the number of sites listed in the table (362).

10.2 Measures taken to ensure the protection of species (Arts. 12 to 16) - Control systems for the incidental capture and killing of species (Art. 12(4))

Issue 102 .

- 1 . The description of how does the control system ensure that there will not be a negative impact on the species should be provided under the separate heading 'No negative impact?' and not as the part of the description of the control system.

No species/species groups were listed.

10.3 Measures taken to ensure the protection of species (Arts. 12 to 16) - General main measures established to deal with the taking/exploitation in the wild of specimens of wild species of Annex V (Art. 14)

Issue 103 .

- 1 . No species/species groups were listed.

10.4 Measures taken to ensure the protection of species (Arts. 12 to 16) - Types of controls to ensure that indiscriminate means of capture and killing of the species of Annex IVa) and Va) are not used (Art. 15)

2.3.1 Surface range of the habitat

Issue 14350 Range in the XML file shows a difference of more than 5 % from the range calculated from the GML file in the corresponding biogeographical region (not buffered for calculation of minimum values and buffered by 15 km for maximum values). This discrepancy can be due to spatial data being generalized during creation of the GML

2.3.1 Surface range of the species

Issue 7750 **Range in the XML file shows a difference of more than 5 % from the range calculated from the GML file in the corresponding biogeographical region (not buffered for calculation of minimum values and buffered by 15 km for maximum values). This discrepancy can be due to spatial data being generalized during creation of the GML**

2.3.6 Species range trend period

Issue 8450 The end of range trend period differs by two years or more from date (or end of period) of range determination. The range area and its trend are most probably not connected, as being estimated from different datasets. This makes the sub-conclusion doubtful
