IMPORTANT NOTE

This QA/QC report is provided for information only. No additional delivery is required from the Member State. The reporting envelope is now closed and you are not able to upload any files.

However, National Data Coordinators are invited to use the Article 17 Consultation Tool to review the national data. The review process allows you to draw attention to new information or to significant errors in the Article 17 report. In doing so, the EU biogeographical assessments will be more accurate.

Please consult the background paper and user manual available at http://circa.europa.eu/Public/irc/env/monnat/library?l=/habitats_reporting/reporting_2001-2007/internet_consultation&vm=detailed&sb=Title to see how you can correct possible errors using the web tool (http://biodiversity.eionet.europa.eu/article17)

GENERAL REPORT - Data not compliant with QA/QC procedures

2. State of designation of Natura 2000
Issue 20 .

1 . The number of sites of community importance provided in the general report (239) does not match the number of sites in the latest Natura 2000 database (237) received from the European Commission prior to 31/12/2006. A value of zero was given as to the number of SACs and area of SACs in Greece. This will be interpreted that no (0) SACs have been designated to date.

3.1 Management tools - Art. 6(1) - Management plans and Management bodies
Issue 31 .

1 . The value indicating the number of sites with management bodies (48) is not equal to the number of sites listed in the table (49).

6. Measures taken in relation to approval of plans and projects - Art. 6(3,4)
Issue 60 .

1 . A value of zero was given for the number of projects for which compensation measures were necessary and Commission opinion was requested. No sites were listed in the relevant categories. It will be interpreted that compensation measures were not necessary and that there was no case where Commission opinion was requested.

2.3.1 Surface range of the habitat

Issue 14350   Range in the XML file shows a difference of more than 5 % from the range calculated from the GML file in the corresponding biogeographical region (not buffered for calculation of minimum values and buffered by15 km for maximum values). This discrepancy can be due to spatial data being generalized during creation of the GML

2.4.7 Species population trend period

Issue 10050 **The end of population trend period differs by two years or more from date (or end of period) of population determination. Population and its trend are most probably not connected, as being estimated from different datasets. This makes the sub-conclusion doubtful**
