

## 92C0 *Platanus orientalis* and *Liquidambar orientalis* woods (*Platanion orientalis*)

---

<b>Habitat code</b>	92C0
<b>Priority</b>	No
<b>Habitat group</b>	Forests
<b>Regions</b>	Alpine, Continental, Mediterranean

Forests and woods, for the most part riparian, dominated by *Platanus orientalis* (oriental plane) or *Liquidambar orientalis* (sweet gum), belonging to the *Platanion orientalis* alliance. The sub-types are Oriental plane woods and Sweet gum woods.

Overall conclusion "U1", ALP bioregion is represented by Bulgaria, non-genuine change because the first reporting. Overall conclusion "U1", CON bioregion is represented by Bulgaria, non-genuine change because the first reporting. Overall conclusion for MED bioregion is "U1" as Italy reported as unfavourable for Area and Range. The nature of change is non-genuine, due to different method and more accurate data.

To the most important threats belong water abstractions from surface waters, removal of dead and dying trees, burning down, forest exploitation without replanting or natural regrowth, grazing, artificial planting on open ground (non-native trees) and removal of forest undergrowth.

The most important pressures are water abstractions from surface waters, removal of dead and dying trees, burning down paths, tracks, cycling tracks, forest exploitation without replanting or natural regrowth, motorised vehicles and pollution to surface waters (limnic & terrestrial, marine & brackish).

# Habitat: 92C0 *Platanus orientalis* and *Liquidambar orientalis* woods -

Report under the Article 17 of the Habitats Directive

## Assessment of conservation status at the European biogeographical level

Region	Conservation status (CS) of parameters				Current CS	Trend in CS	% in region	Previous CS	Reason for change
	Range	Area	Structure & Functions	Future prospects					
ALP	FV	FV	U1	U1	U1	=	2	XX	Not genuine
CON	FV	FV	U1	U1	U1	=	7	XX	Not genuine
MED	U1	U1	FV	XX	U1	=	91	FV	Not genuine

See the endnote for more information<sup>i</sup>

# Habitat: 92C0 *Platanus orientalis* and *Liquidambar orientalis* woods -

Report under the Article 17 of the Habitats Directive

## Assessment of conservation status at the Member State level

### Habitat: 92C0

Distribution and conservation status at the Member State level

The map shows both Conservation Status and distribution using a 10 km x 10 km grid. Conservation status is assessed at biogeographical level. Therefore the representation in each grid cell is only illustrative.

# Habitat: 92C0 *Platanus orientalis* and *Liquidambar orientalis* woods -

Report under the Article 17 of the Habitats Directive

MS	Region	Conservation status (CS) of parameters				Current CS	Trend in CS	% in region	Previous CS	Reason for change
		Range	Area	Structure & functions	Future prospects					
BG	ALP	FV	FV	U1	U1	U1	=	100.0		
BG	CON	FV	FV	U1	U1	U1	=	100.0		
CY	MED	FV	FV	FV	FV	FV		9.5	U1+	Better data
GR	MED	FV	FV	FV	XX	FV		78.3	FV	
IT	MED	U1	U1	U1	U1	U1	-	12.2	FV	Changed method

Knowing that not all changes in conservation status between the reporting periods were genuine, Member States were asked to give the reasons for changes in conservation status. Bulgaria and Romania only joined the EU in 2007 and Greece did not report for 2007-12 so no reason is given for change for these countries. Greek data shown above is from 2001-06.

## Main pressures and threats reported by Member States

Member States were asked to report the 20 most important threats and pressures using an agreed hierarchical list which can be found on the [Article 17 Reference Portal](#). Pressures are activities which are currently having an impact on the habitats and threats are activities expected to have an impact in the near future. Pressures and threats were ranked in three classes 'high, medium and low importance'; the tables below only show threats and pressures classed as 'high', for some habitats there were less than ten threats or pressures reported as highly important.

### Ten most frequently reported 'highly important' pressures

Code	Activity	Frequency
J02	Changes in water bodies conditions	67
B03	Forest exploitation	33

### Ten most frequently reported 'highly important' threats

Code	Activity	Frequency
J02	Changes in water bodies conditions	67
B03	Forest exploitation	33

# Habitat: 92C0 *Platanus orientalis* and *Liquidambar orientalis* woods -

Report under the Article 17 of the Habitats Directive

## Proportion of population covered by the Natura 2000 network

Member States were asked to report the area of the habitat which is covered by the Natura 2000 network. The percentage of the habitat area covered by the network was estimated by comparing the area within the network and the total area in the biogeographical/marine region.

### Percentage of coverage by Natura 2000 sites in biogeographical/marine region

	ALP	CON	MED
<b>BG</b>	23	90	
<b>CY</b>			50
<b>IT</b>			83

See the endnotes for more information<sup>ii</sup>

## Most frequently reported conservation measures

Member States were asked to report up to 20 conservation measures being implemented for this habitat using an agreed list which can be found on the Article 17 Reference Portal. Member States were further requested to highlight up to five most important ('highly important') measures; the table below only shows measures classed as 'high', for many habitats there were less than ten measures reported as highly important.

### Ten most frequently reported 'highly important' conservation measures

Code	Measure	Frequency
6.1	Establish protected areas/sites	30
3.1	Restoring/improving forest habitats	20
3.2	Adapt forest management	20
9.1	Regulating/Management exploitation of natural resources on land	20
6.3	Legal protection of habitats and species	10

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2013 and covering the period 2007-2012. More detailed information, including the MS reports, is available at:

<http://bd.eionet.europa.eu/article17/reports2012/habitat/summary/?group=Forests&period=3&subject=92C0>

# Habitat: 92C0 *Platanus orientalis* and *Liquidambar orientalis* woods -

Report under the Article 17 of the Habitats Directive

**i Assessment of conservation status at the European biogeographical level:** Current Conservation Status (Current CS) shows the status for the reporting period 2007-2012, Previous Conservation Status (Previous CS) for the reporting period 2000-2006. Reason for change in conservation status between the reporting periods indicates whether the changes in the status were genuine or not genuine. Previous Conservation Status was not assessed for Steppic, Black Sea and Marine Black Sea regions. For these regions the Previous status is therefore considered as 'unknown'. The percentage of the habitat area occurring within the biogeographical/marine region (% in region) is calculated based on the area of GIS distribution.

**ii Percentage of coverage by Natura 2000 sites in biogeographical/marine region:** In some cases the population size within the Natura 2000 network has been estimated using a different methodology to the estimate of overall population size and this can lead to percentage covers greater than 100%. In such case the value has been given as 100% and highlighted with an asterisk (\*). The value 'x' indicates that the Member State has not reported the habitat area and/or the coverage by Natura 2000. No information is available for Greece. The values are only provided for regions, in which the occurrence of the habitat has been reported by the Member States.
