Report under the Article 17 of the Habitats Directive Period 2007-2012

# **European Environment Agency** *European Topic Centre on Biological Diversity*

### 6440 Alluvial meadows of river valleys of the Cnidion dubii

Habitat code 6440 Priority No

Habitat group Grasslands

**Regions** Alpine, Atlantic, Black Sea, Continental, Pannonian, Steppic

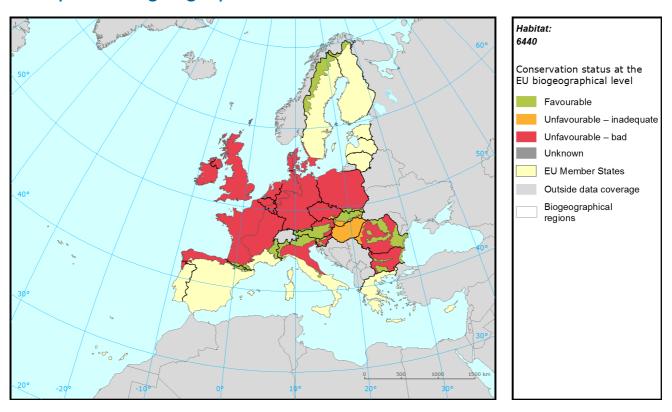

These meadows, which occur alongside large rivers, result from a combination of regular flooding and mowing for hay production and were typical of central Europe. The area of this habitat has been greatly reduced during the 20th Century.

In the Atlantic and Continental region the habitat is assessed as Unfavourable-bad while in the Pannonian region the status is Unfavourable-inadequate (and deteriorating). Only Romania has reported this habitat from the Alpine, Black Sea and Steppic region and as Favourable in each region, Romania was the only country to report this habitat as Favourable in the Continental region, in each case the area reported appears to be an overestimate. There have been no genuine changes in conservation status.

The major pressures and threats include modification of cultivation practices (including agricultural intensification in mowing, grazing or grassland removal for arable land or on the contrary abandonment of mowing or grazing linked to succession), cultivation and related fertilisation, changes in hydrology or invasive non-native species. From Romania intensive mixed animal grazing is reported as a factor of medium intensity.

Report under the Article 17 of the Habitats Directive

## Assessment of conservation status at the European biogeographical level

Report under the Article 17 of the Habitats Directive

#### Assessment of conservation status at the Member State level

The map shows both Conservation Status and distribution using a  $10 \text{ km} \times 10 \text{ km}$  grid. Conservation status is assessed at biogeographical level. Therefore the representation in each grid cell is only illustrative.

Report under the Article 17 of the Habitats Directive

| Conservation status (CS) of parameters |        |       |      |                             |                     |               |                |             |                |                   |

Knowing that not all changes in conservation status between the reporting periods were genuine, Member States were asked to give the reasons for changes in conservation status. Bulgaria and Romania only joined the EU in 2007 and Greece did not report for 2007-12 so no reason is given for change for these countries. Greek data shown above is from 2001-06.

#### Main pressures and threats reported by Member States

Member States were asked to report the 20 most important threats and pressures using an agreed hierarchical list which can be found on the Article 17 Reference Portal. Pressures are activities which are currently having an impact on the habitats and threats are activities expected to have an impact in the near future. Pressures and threats were ranked in three classes 'high, medium and low importance'; the tables below only show threats and pressures classed as 'high', for some habitats there were less than ten threats or pressures reported as highly important.

Report under the Article 17 of the Habitats Directive

#### Ten most frequently reported 'highly important' pressures

| Code | Activity                                   | Frequency |
|------|--|-----------|
| A02  | Modification of cultivation practices      | 24        |
| A03  | Mowing or cutting grasslands               | 24        |
| A08  | Fertilisation in agriculture               | 18        |
| A04  | Grazing by livestock                       | 12        |
| A01  | Agricultural cultivation                   | 6         |
| I01  | Invasive alien species                     | 6         |
| J02  | Changes in water bodies conditions         | 6         |
| K02  | Vegetation succession/Biocenotic evolution | 6         |

#### Ten most frequently reported 'highly important' threats

| Code | Activity                                   | Frequency |
|------|--|-----------|
| A02  | Modification of cultivation practices      | 25        |
| A08  | Fertilisation in agriculture               | 19        |
| J02  | Changes in water bodies conditions         | 19        |
| A03  | Mowing or cutting grasslands               | 13        |
| A01  | Agricultural cultivation                   | 6         |
| A04  | Grazing by livestock                       | 6         |
| I01  | Invasive alien species                     | 6         |
| K02  | Vegetation succession/Biocenotic evolution | 6         |

Report under the Article 17 of the Habitats Directive

### Proportion of population covered by the Natura 2000 network

Member States were asked to report the area of the habitat which is covered by the Natura 2000 network. The percentage of the habitat area covered by the network was estimated by comparing the area within the network and the total area in the biogeographical/marine region.

#### Percentage of coverage by Natura 2000 sites in biogeographical/marine region

|    | ALP | ATL | BLS | CON | PAN | STE |
|----|-----|-----|-----|-----|-----|-----|
| AT |     |     |     | 100 |     |     |
| BG |     |     |     | 70  |     |     |
| CZ |     |     |     | 80  | 74  |     |
| DE |     | 86  |     | 96  |     |     |
| FR |     |     |     | 100 |     |     |
| HU |     |     |     |     | 76  |     |
| PL |     |     |     | 42  |     |     |
| RO | 57  |     | 71  | 54  | 53  | 64  |
| SK |     |     |     |     | 50  |     |

See the endnotes for more information ii

### Most frequently reported conservation measures

Member States were asked to report up to 20 conservation measures being implemented for this habitat using an agreed list which can be found on the Article 17 Reference Portal. Member States were further requested to highlight up to five most important ('highly important') measures; the table below only shows measures classed as 'high', for many habitats there were less than ten measures reported as highly important.

#### Ten most frequently reported 'highly important' conservation measures

| Code | Measure   | Frequency |
|------|---|-----------|
| 2.1  | Maintaining grasslands and other open habitats                  | 28        |
| 6.1  | Establish protected areas/sites                                 | 20        |
| 4.2  | Restoring/improving the hydrological regime                     | 16        |
| 6.0  | Other spatial measures  | 12        |
| 2.2  | Adapting crop production  | 8         |
| 6.4  | Manage landscape features                                       | 8         |
| 2.0  | Other agriculture-related measures                              | 4         |
| 9.1  | Regulating/Management exploitation of natural resources on land | 4         |

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2013 and covering the period 2007-2012. More detailed information, including the MS reports, is available at: http://bd.eionet.europa.eu/article17/reports2012/habitat/summary/?

Report under the Article 17 of the Habitats Directive

Assessment of conservation status at the European biogeographical level: Current Conservation Status (Current CS) shows the status for the reporting period 2007-2012, Previous Conservation Status (Previous CS) for the reporting period 2000-2006. Reason for change in conservation status between the reporting periods indicates whether the changes in the status were genuine or not genuine. Previous Conservation Status was not assessed for Steppic, Black Sea and Marine Black Sea regions. For these regions the Previous status is therefore considered as 'unknown'. The percentage of the habitat area occurring within the biogeographical/marine region (% in region) is calculated based on the area of GIS distribution.

iiPercentage of coverage by Natura 2000 sites in biogeographical/marine region: In some cases the population size within the Natura 2000 network has been estimated using a different methodology to the estimate of overall population size and this can lead to percentage covers greater than 100%. In such case the value has been given as 100% and highlighted with an asterisk (\*). The value 'x' indicates that the Member State has not reported the habitat area and/or the coverage by Natura 2000. No information is available for Greece. The values are only provided for regions, in which the occurrence of the habitat has been reported by the Member States.
