

Hydromantes strinati

Annex	II, IV
Priority	No
Species group	Amphibians
Regions	Alpine, Continental, Mediterranean

Hydromantes strinati

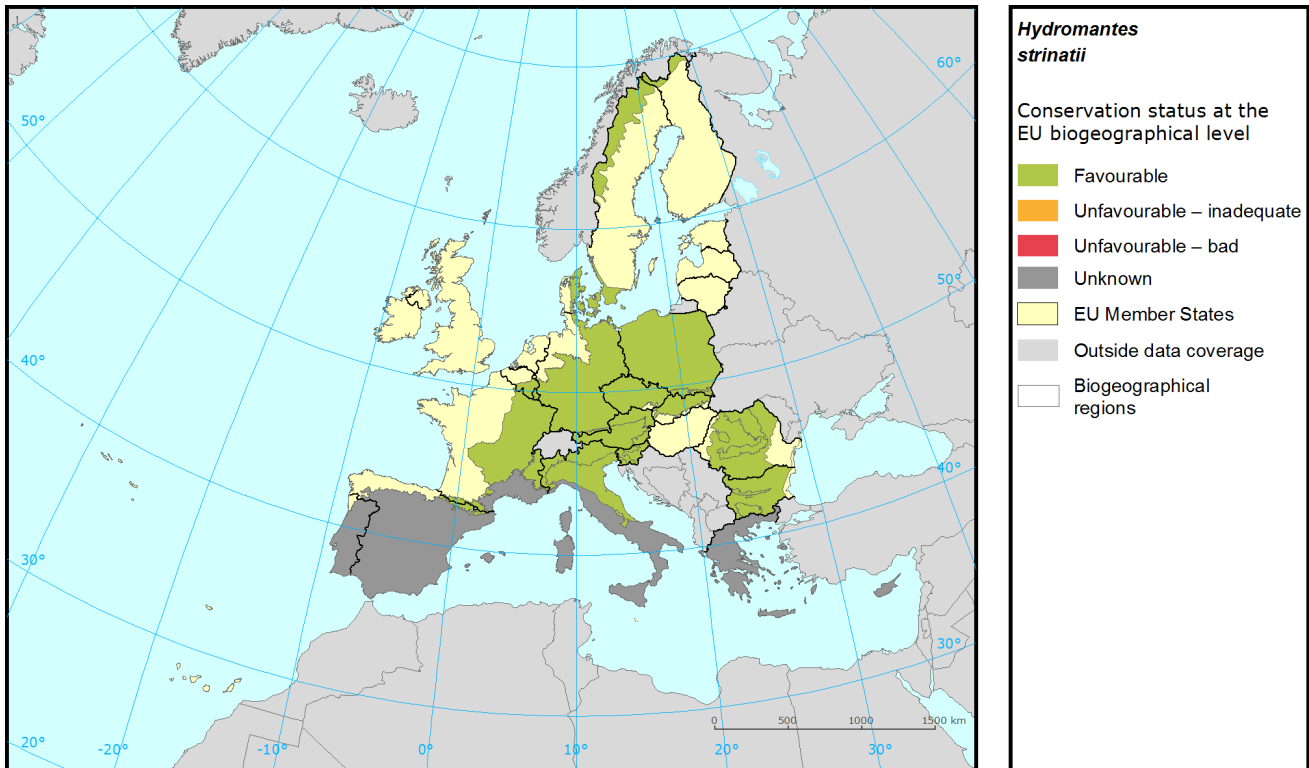

The French or north-west Italian cave salamander has little available population information, but it is distributed in France, Italy and Monaco. According to IUCN Red List data, it is found in the vicinity of streams and seepages and amongst rocky outcrops and caves in mountainous areas.

The species has a favourable conservation status in the Alpine and Continental biogeographical regions, and unknown status in the Mediterranean region.

The IUCN Red list classifies the species as near threatened due mainly to its small extent of occurrence and potentially declining habitat (<http://www.iucnredlist.org/details/59405/1> consulted on 02 March 2015). The main pressures and threats are human induced changes in hydraulic conditions, mountaineering, rock climbing and speleology, roads, paths and railroads, and urbanized areas/human habitation.

Species: *Hydromantes strinatii*
Report under the Article 17 of the Habitats Directive

Assessment of conservation status at the European biogeographical level

Region	Conservation status (CS) of parameters				Current CS	Trend in CS	% in region	Previous CS	Reason for change
	Range	Population	Habitat	Future prospects

FR	MED	XX	XX	FV	XX		29.4	FV	Better data	
IT	MED	FV	FV	FV	FV		70.6	FV		

Knowing that not all changes in conservation status between the reporting periods were genuine, Member States were asked to give the reasons for changes in conservation status. Bulgaria and Romania only joined the EU in 2007 and Greece did not report for 2007-12 so no reason is given for change for these countries. Greek data shown above is from 2001-06.

Main pressures and threats reported by Member States

Member States were asked to report the 20 most important threats and pressures using an agreed hierarchical list which can be found on the [Article 17 Reference Portal](#). Pressures are activities which are currently having an impact on the species and threats are activities expected to have an impact in the near future. Pressures and threats were ranked in three classes 'high, medium and low importance'; the tables below only show threats and pressures classed as 'high', for some species there were less than ten threats or pressures reported as highly important.

Ten most frequently reported 'highly important' pressures

Code	Activity	Frequency
G01	Outdoor sports, leisure and recreational activities	33
J02	Changes in water bodies conditions	33
D01	Roads, railroads and paths	22
E01	Urbanisation and human habitation	11

Ten most frequently reported 'highly important' threats

Code	Activity	Frequency
J02	Changes in water bodies conditions	31
G01	Outdoor sports, leisure and recreational activities	23
D01	Roads, railroads and paths	15
E01	Urbanisation and human habitation	15
F03	Hunting and collection of terrestrial wild animals	8
H04	Air pollution, air-borne pollutants	8

Species: *Hydromantes strinatii*

Report under the Article 17 of the Habitats Directive

Proportion of population covered by the Natura 2000 network

For species listed in the Annex II of the Directive Member States were asked to report the population size within the Natura 2000 network. The percentage of species population covered by the network was estimated by comparing the population size within the network and the total population size in the biogeographical/marine region.

Percentage of coverage by Natura 2000 sites in biogeographical/marine region

	ALP	CON	MED
FR	x		x
IT	x	x	x

See the endnotes for more informationⁱⁱ

Most frequently reported conservation measures

For species listed in the Annex II of the Directive Member States were asked to report up to 20 conservation measures being implemented for this species using an agreed list which can be found on the Article 17 Reference Portal. Member States were further requested to highlight up to five most important ('highly important') measures; the table below only shows measures classed as 'high', for many species there were less than ten measures reported as highly important.

Ten most frequently reported 'highly important' conservation measures

Code	Measure	Frequency
8.2	Specific management of traffic and energy transport systems	100

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2013 and covering the period 2007-2012. More detailed information, including the MS reports, is available at:

<http://bd.eionet.europa.eu/article17/reports2012/species/summary/?group=Amphibians&period=3&subject=Hydromantes+strinatii>

Species: *Hydromantes strinatii*

Report under the Article 17 of the Habitats Directive

i Assessment of conservation status at the European biogeographical level: Current Conservation Status (Current CS) shows the status for the reporting period 2007-2012, Previous Conservation Status (Previous CS) for the reporting period 2000-2006. Reason for change in conservation status between the reporting periods indicates whether the changes in the status were genuine or not genuine. Previous Conservation Status was not assessed for Steppic, Black Sea and Marine Black Sea regions. For these regions the Previous status is therefore considered as 'unknown'. The percentage of the species population occurring within the biogeographical/marine region (% in region) is calculated based on the area of GIS distribution.

ii Percentage of coverage by Natura 2000 sites in biogeographical/marine region: In some cases the population size within the Natura 2000 network has been estimated using a different methodology to the estimate of overall population size and this can lead to percentage covers greater than 100%. In such case the value has been given as 100% and highlighted with an asterisk (*). The value 'x' indicates that the Member State has not reported the species population and/or the coverage by Natura 2000. No information is available for Greece. The values are only provided for regions, in which the occurrence of the species has been reported by the Member States.
