

## Rana graeca

---

<b>Annex</b>	IV
<b>Priority</b>	No
<b>Species group</b>	Amphibians
<b>Regions</b>	Alpine, Continental, Mediterranean

### *Rana graeca*

The Greek Stream Frog is widespread and locally relatively abundant throughout the Balkan Peninsula. It is mainly an aquatic species, often occurring in small rivers and streams in forested and mountainous areas.

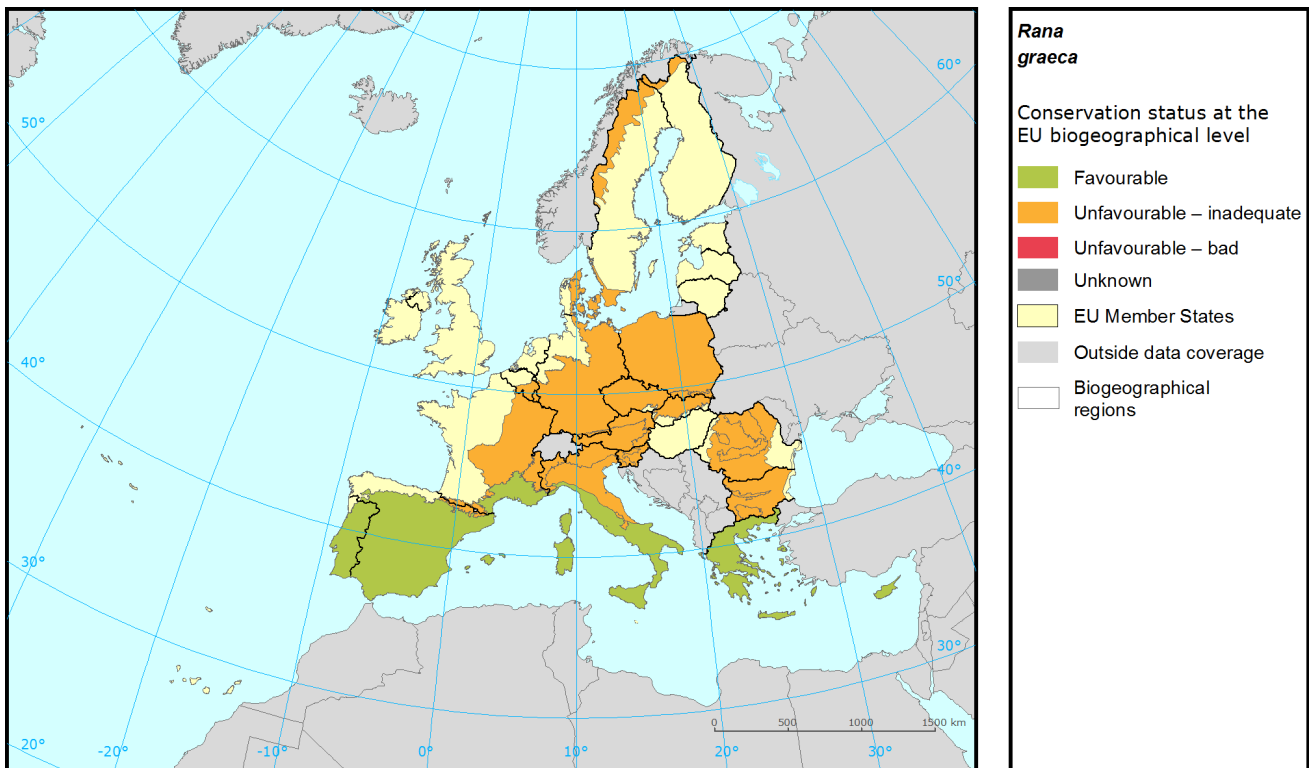

The species was reported for Bulgaria in the alpine and continental regions with an 'unfavourable-inadequate' conservation status. Amongst the main pressures and threats were roads and motorways (high importance) and anthropogenic reduction of habitat connectivity, natural fires, small hydropower projects and the use of biocides, chemicals and hormones (medium importance). In the Mediterranean biogeographical region, Greece reported a 'favourable' conservation status.

According to the IUCN Red List, the frog is classified as 'least concern' as its range and population size are stable (<http://www.iucnredlist.org/details/58605/1>, consulted on 09 February 2015).

# Species: *Rana graeca*

Report under the Article 17 of the Habitats Directive

## Assessment of conservation status at the European biogeographical level

Region	Conservation status (CS) of parameters				Current CS	Trend in CS	% in region	Previous CS	Reason for change
	Range	Population	Habitat	Future prospects					
ALP	FV	FV	U1	U1	U1	x	6	XX	Not genuine
CON	FV	FV	U1	U1	U1	x	8	XX	Not genuine
MED	FV	FV	XX	FV	FV		86	FV	

See the endnote for more information<sup>i</sup>

# Species: *Rana graeca*

Report under the Article 17 of the Habitats Directive

## Assessment of conservation status at the Member State level

### *Rana graeca*

Distribution and conservation status at the Member State level

- |                           |                        |
|---------------------------|------------------------|
| Favourable                | EU Member States       |
| Unfavourable – inadequate | Outside data coverage  |
| Unfavourable – bad        | Biogeographical region |
| Unknown                   |                        |

The map shows both Conservation Status and distribution using a 10 km x 10 km grid. Conservation status is assessed at biogeographical level. Therefore the representation in each grid cell is only illustrative.

# Species: *Rana graeca*

Report under the Article 17 of the Habitats Directive

MS Region	Conservation status of parameters				Current CS	Trend in CS	% in region	Previous CS	Reason for change
	Range	Population	Habitat	Future prospects					
BG ALP	FV	FV	U1	U1	U1	x	100.0		
BG CON	FV	FV	U1	U1	U1	x	100.0		
GR MED	FV	FV	XX	FV	FV		100.0	FV	

Knowing that not all changes in conservation status between the reporting periods were genuine, Member States were asked to give the reasons for changes in conservation status. Bulgaria and Romania only joined the EU in 2007 and Greece did not report for 2007-12 so no reason is given for change for these countries. Greek data shown above is from 2001-06.

## Main pressures and threats reported by Member States

Member States were asked to report the 20 most important threats and pressures using an agreed hierarchical list which can be found on the [Article 17 Reference Portal](#). Pressures are activities which are currently having an impact on the species and threats are activities expected to have an impact in the near future. Pressures and threats were ranked in three classes 'high, medium and low importance'; the tables below only show threats and pressures classed as 'high', for some species there were less than ten threats or pressures reported as highly important.

### Ten most frequently reported 'highly important' pressures

Code	Activity	Frequency
D01	Roads, railroads and paths	100

### Ten most frequently reported 'highly important' threats

Code	Activity	Frequency
D01	Roads, railroads and paths	100

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2013 and covering the period 2007-2012. More detailed information, including the MS reports, is available at: <http://bd.eionet.europa.eu/article17/reports2012/species/summary/?group=Amphibians&period=3&subject=Rana+graeca>

# Species: *Rana graeca*

Report under the Article 17 of the Habitats Directive

**i Assessment of conservation status at the European biogeographical level:** Current Conservation Status (Current CS) shows the status for the reporting period 2007-2012, Previous Conservation Status (Previous CS) for the reporting period 2000-2006. Reason for change in conservation status between the reporting periods indicates whether the changes in the status were genuine or not genuine. Previous Conservation Status was not assessed for Steppic, Black Sea and Marine Black Sea regions. For these regions the Previous status is therefore considered as 'unknown'. The percentage of the species population occurring within the biogeographical/marine region (% in region) is calculated based on the area of GIS distribution.
