Report under the Article 17 of the Habitats Directive Period 2007-2012

European Environment Agency *European Topic Centre on Biological Diversity*

Alosa alosa

Annex II, V Priority No Species group Fish

Regions Atlantic, Continental, Mediterranean

The Allis Shad is a migratory fish found in major rivers, open waters and along the coast of the Atlantic (Ireland, Great Britain, France, Spain, Portugal and Morocco), Baltic, and north and western Mediterranean Seas.

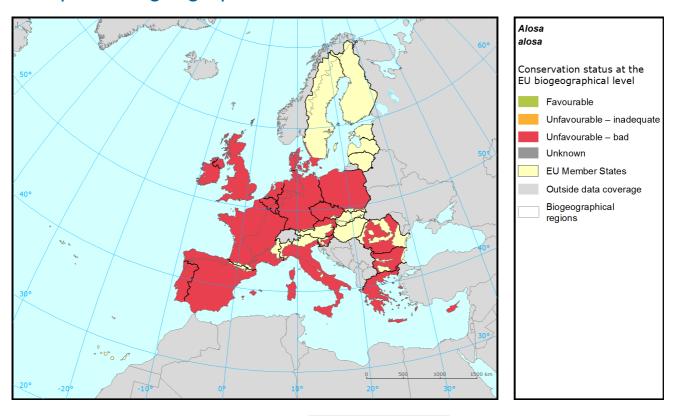

Its conservation status in the Atlantic region is 'unfavourable-bad' with declining populations. Largest population is in France; very low numbers in Germany, Ireland and the Netherlands; landlocked populations in Portugal and Spain. Main pressures are overfishing, use of biocides, hormones and chemicals, obstacles to migration (dams), water abstraction and dredging. The decision on whether/how to build the Severn Barrage will have significant consequences for this species in the UK.

In the Mediterranean region its status is 'unfavourable-bad' and deteriorating with declining populations. There are several landlocked populations in the lakes of dams, namely on the Mondego, lower Tagus and Guadiana. Main pressures are pelagic trawling, canalisation, loss of spawning habitat (dredging), water abstraction and obstacles to migration (dams).

Its conservation status in the Continental region is 'unfavourable-bad' and deteriorating with declining populations. The species is very rare and little known in Denmark; it became extinct in Poland possibly before the adoption of the Habitats Directive. Main pressures are overfishing, canalisation, loss of spawning habitat, and obstacles to migration (dams).

The species is classified by IUCN as 'least concern' (http://www.iucnredlist.org/details/903/0, consulted 17 April 2014).

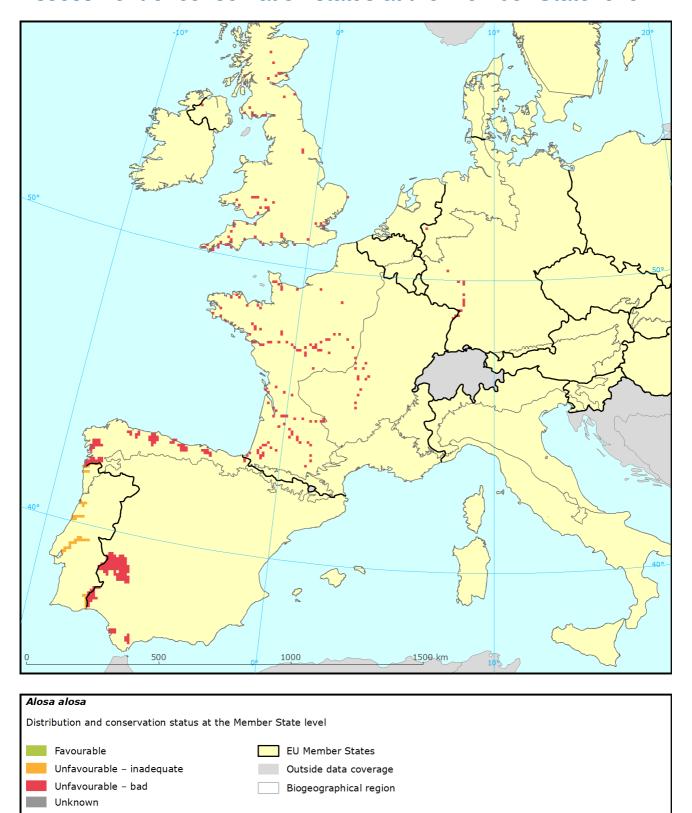

Assessment of conservation status at the European biogeographical level

Region •	Conser	vation status	(CS) of p	arameters	Current	Trend in CS	% in region	Previous	Reason for change
	Range	Population	Habitat	Future prospects	CS			CS	
ATL	U1	U2	U1	U1	U2	=	59	U2	
CON	XX	U2	XX	U2	U2	-	6	U2	
MED	U2	U2	U2	U2	U2	-	35	U2	

See the endnote for more informationⁱ

Assessment of conservation status at the Member State level

The map shows both Conservation Status and distribution using a $10 \text{ km} \times 10 \text{ km}$ grid. Conservation status is assessed at biogeographical level. Therefore the representation in each grid cell is only illustrative.

Report under the Article 17 of the Habitats Directive

MS Region		Cons	ervation stat	ameters	Current	Trend in	% in	Previous	Reason for	
		Range	Population	Habitat	Future prospects	CS	CS CS	region	CS	change
DE	ATL	XX	U2	FV	XX	U2	+	0.4	U2	Genuine
DK	ATL	XX	XX	XX	XX	XX			XX	
ES	ATL	U2	U2	U1	U1	U2	=	27.8	XX	Changed method

DK	CON	XX	XX	XX	XX	XX			XX	
FR	CON	U1	U2	U1	U2	U2	-	52.0	U2	
ES	MED	U2	U2	U2	U2	U2	-	75.5	XX	Changed method
PT	MED	FV	XX	U1	U1	U1	=	24.5	U2	Changed method

Knowing that not all changes in conservation status between the reporting periods were genuine, Member States were asked to give the reasons for changes in conservation status. Bulgaria and Romania only joined the EU in 2007 and Greece did not report for 2007-12 so no reason is given for change for these countries. Greek data shown above is from 2001-06.

Main pressures and threats reported by Member States

Member States were asked to report the 20 most important threats and pressures using an agreed hierarchical list which can be found on the Article 17 Reference Portal. Pressures are activities which are currently having an impact on the species and threats are activities expected to have an impact in the near future. Pressures and threats were ranked in three classes 'high, medium and low importance'; the tables below only show threats and pressures classed as 'high', for some species there were less than ten threats or pressures reported as highly important.

Ten most frequently reported 'highly important' pressures

Code	Activity	Frequency
J02	Changes in water bodies conditions	33
F02	Fishing and harvesting aquatic resources	24
J03	Other changes to ecosystems	24
C01	Mining and quarrying	10
A07	Use of 'pesticides' in agriculture	5
A09	Irrigation in agriculture	5

Report under the Article 17 of the Habitats Directive

Ten most frequently reported 'highly important' threats

Code	Activity	Frequency
J02	Changes in water bodies conditions	33
J03	Other changes to ecosystems	29
F02	Fishing and harvesting aquatic resources	19
C01	Mining and quarrying	10
A07	Use of 'pesticides' in agriculture	5
A09	Irrigation in agriculture	5

Proportion of population covered by the Natura 2000 network

For species listed in the Annex II of the Directive Member States were asked to report the population size within the Natura 2000 network. The percentage of species population covered by the network was estimated by comparing the population size within the network and the total population size in the biogeographical/marine region.

Percentage of coverage by Natura 2000 sites in biogeographical/marine region

	ATL	CON	MED
DE	Х	88	
ES	33		50
FR	Χ	Χ	
PT	Χ		Χ
UK	Χ		

See the endnotes for more information ii

Species: Alosa alosa

Report under the Article 17 of the Habitats Directive

Most frequently reported conservation measures

For species listed in the Annex II of the Directive Member States were asked to report up to 20 conservation measures being implemented for this species using an agreed list which can be found on the Article 17 Reference Portal. Member States were further requested to highlight up to five most important ('highly important') measures; the table below only shows measures classed as 'high', for many species there were less than ten measures reported as highly important.

Ten most frequently reported 'highly important' conservation measures

Code	Measure	Frequency
4.1	Restoring/improving water quality	24
4.2	Restoring/improving the hydrological regime	20
4.3	Managing water abstraction	12
7.2	Regulation/ Management of fishery in limnic systems	12
4.0	Other wetland-related measures	8
5.1	Restoring marine habitats	8
6.3	Legal protection of habitats and species	8
7.4	Specific single species or species group management measures	8

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2013 and covering the period 2007-2012. More detailed information, including the MS reports, is available at: http://bd.eionet.europa.eu/article17/reports2012/species/summary/? group=Fish&period=3&subject=Alosa+alosa

Species: Alosa alosa

Report under the Article 17 of the Habitats Directive

Assessment of conservation status at the European biogeographical level: Current Conservation Status (Current CS) shows the status for the reporting period 2007-2012, Previous Conservation Status (Previous CS) for the reporting period 2000-2006. Reason for change in conservation status between the reporting periods indicates whether the changes in the status were genuine or not genuine. Previous Conservation Status was not assessed for Steppic, Black Sea and Marine Black Sea regions. For these regions the Previous status is therefore considered as 'unknown'. The percentage of the species population occurring within the biogeographical/marine region (% in region) is calculated based on the area of GIS distribution.

ⁱⁱPercentage of coverage by Natura 2000 sites in biogeographical/marine region: In some cases the population size within the Natura 2000 network has been estimated using a different methodology to the estimate of overall population size and this can lead to percentage covers greater than 100%. In such case the value has been given as 100% and highlighted with an asterisk (*). The value 'x' indicates that the Member State has not reported the species population and/or the coverage by Natura 2000. No information is available for Greece. The values are only provided for regions, in which the occurrence of the species has been reported by the Member States.
