

## Algyroides nigropunctatus

---

<b>Annex</b>	IV
<b>Priority</b>	No
<b>Species group</b>	Reptiles
<b>Regions</b>	Continental, Mediterranean

The lizard *Algyroides nigropunctatus* ranges along the eastern Adriatic coastal region from extreme northeastern Italy and southern Slovenia, southwards into coastal Croatia and a few river valleys in Bosnia-Herzegovina, through southern Serbia, Montenegro, Albania, Macedonia to western Greece. It is present on some Croatian Adriatic islands and on the Ionian islands of Greece. It can be abundant in suitable habitat.

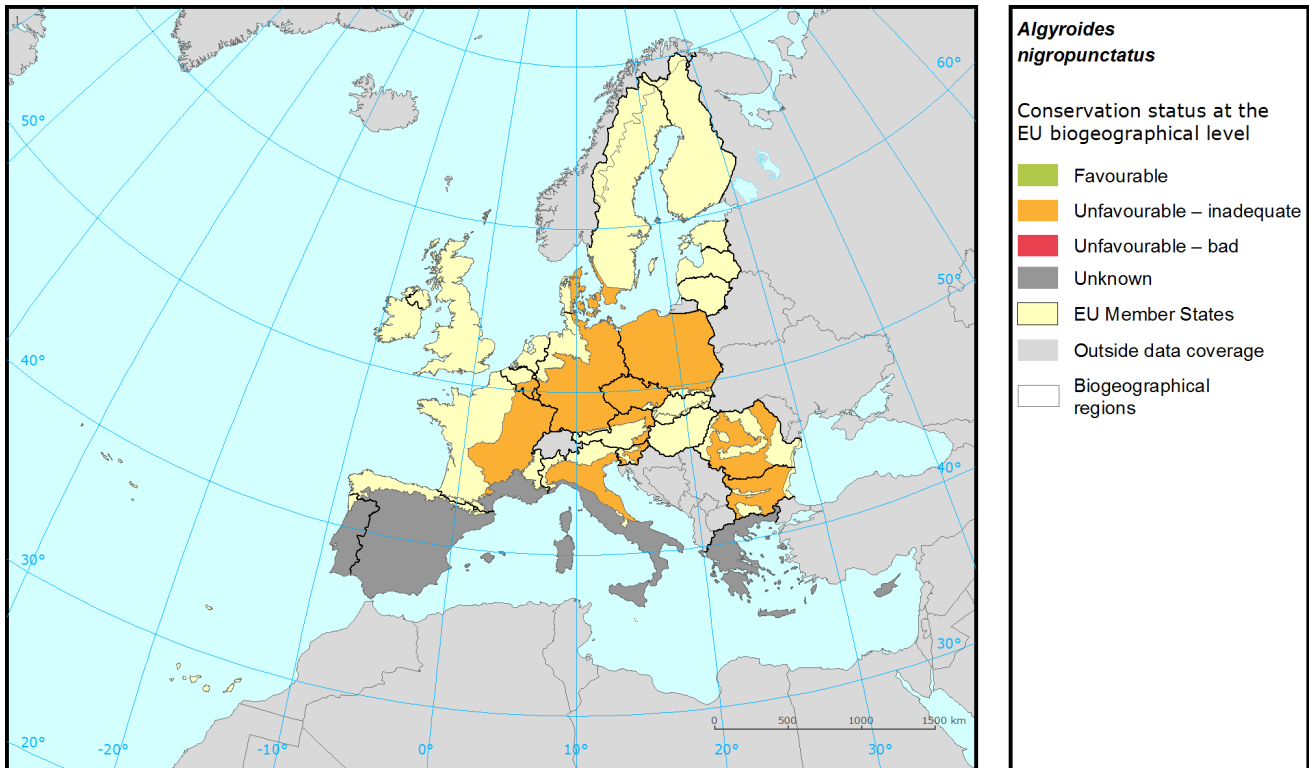

The conservation status in the Continental biogeographic region is unfavourable – inadequate as Slovenia assessed all parameters except rang in this category; the conservation status in the Mediterranean biogeographic region is unknown. The previous conservation status was the same as current one in both regions. The IUCN Red List classifies the species as Least concern (Lc).

The threats to this species are not well known, it may be locally threatened by habitat loss through fires, deforestation, agricultural intensification and the development of tourism facilities.

# Species: *Algyroides nigropunctatus*

Report under the Article 17 of the Habitats Directive

## Assessment of conservation status at the European biogeographical level

Region	Conservation status (CS) of parameters				Current CS	Trend in CS	% in region	Previous CS	Reason for change
	Range	Population	Habitat	Future prospects					
CON	FV	U1	U1	U1	U1	-	19	U1	
MED	FV	XX	XX	XX	XX		81	XX	

See the endnote for more information<sup>i</sup>

# Species: *Algyroides nigropunctatus*

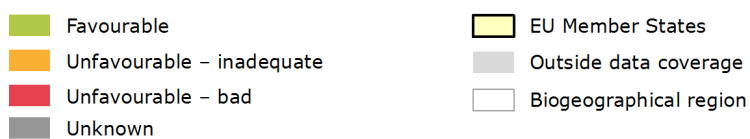

Report under the Article 17 of the Habitats Directive

## Assessment of conservation status at the Member State level

### *Algyroides nigropunctatus*

Distribution and conservation status at the Member State level

The map shows both Conservation Status and distribution using a 10 km x 10 km grid. Conservation status is assessed at biogeographical level. Therefore the representation in each grid cell is only illustrative.

# Species: *Algyroides nigropunctatus*

Report under the Article 17 of the Habitats Directive

MS	Region	Conservation status of parameters				Current CS	Trend in CS	% in region	Previous CS	Reason for change
		Range	Population	Habitat	Future prospects					
IT	CON	FV	FV	FV	FV	FV		31.6	FV	
SI	CON	FV	U1	U1	U1	U1	-	68.4	U1	
GR	MED	FV	XX	XX	XX	XX		100.0	XX	

Knowing that not all changes in conservation status between the reporting periods were genuine, Member States were asked to give the reasons for changes in conservation status. Bulgaria and Romania only joined the EU in 2007 and Greece did not report for 2007-12 so no reason is given for change for these countries. Greek data shown above is from 2001-06.

## Main pressures and threats reported by Member States

Member States were asked to report the 20 most important threats and pressures using an agreed hierarchical list which can be found on the [Article 17 Reference Portal](#). Pressures are activities which are currently having an impact on the species and threats are activities expected to have an impact in the near future. Pressures and threats were ranked in three classes 'high, medium and low importance'; the tables below only show threats and pressures classed as 'high', for some species there were less than ten threats or pressures reported as highly important.

### Ten most frequently reported 'highly important' pressures

Code	Activity	Frequency
No 'highly important' pressures were reported.		

### Ten most frequently reported 'highly important' threats

Code	Activity	Frequency
No 'highly important' threats were reported.		

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2013 and covering the period 2007-2012. More detailed information, including the MS reports, is available at: <http://bd.eionet.europa.eu/article17/reports2012/species/summary/?group=Reptiles&period=3&subject=Algyroides+nigropunctatus>

# Species: *Algyroides nigropunctatus*

Report under the Article 17 of the Habitats Directive

**i Assessment of conservation status at the European biogeographical level:** Current Conservation Status (Current CS) shows the status for the reporting period 2007-2012, Previous Conservation Status (Previous CS) for the reporting period 2000-2006. Reason for change in conservation status between the reporting periods indicates whether the changes in the status were genuine or not genuine. Previous Conservation Status was not assessed for Steppic, Black Sea and Marine Black Sea regions. For these regions the Previous status is therefore considered as 'unknown'. The percentage of the species population occurring within the biogeographical/marine region (% in region) is calculated based on the area of GIS distribution.
