

Approaches in WP 3.1.

Horizontal Approach

- Assessment Identification of Regional Sustainability Indices (RSIs) for each landscape and NUTS-X region within EU-25
- Policy Information System with focus on protected areas (national & international) and national spatial planning schemes
- RSIs must allow to provide insight of likely effects of M2 trends on M3-Regions
- Output: (1) Aggregated results of RSI for each region, and (2) spatial detail at sub-regional level

Vertical & Horizontal approaches

Horizontal approach

EU - 25
Regional Sustainability Index (RSI)

Policy A:
EU Spatial Designations

Policy B:
EU Non-spatial Regulations

LandMap-Region

**Spatial
Integration**

NUTS-Region

Environment RSI

- Landscape structure
- Air, Water & Soil
- Biodiversity

Social RSI

- Tourism
- Recreation
- Landscape heritage / aesthetics

Economic RSI

- Land Use GDP
- Settlement pressure
- Innovation score

RS Index

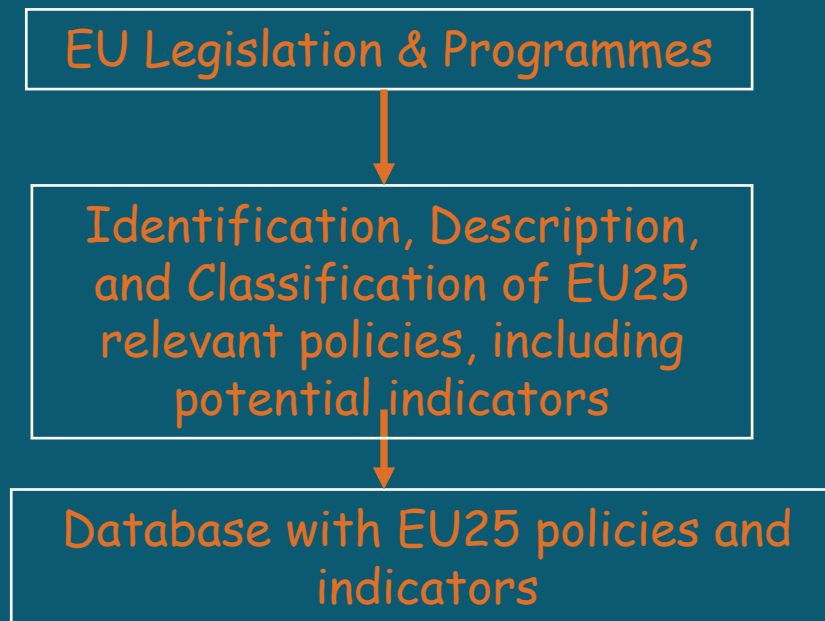

A basic infrastructure, with multi-purpose prospects

Horizontal Approach: EU-relevant Policies

Objective: Create a relational database for EU 25 policies (horizontal approach for one sustainability issue)

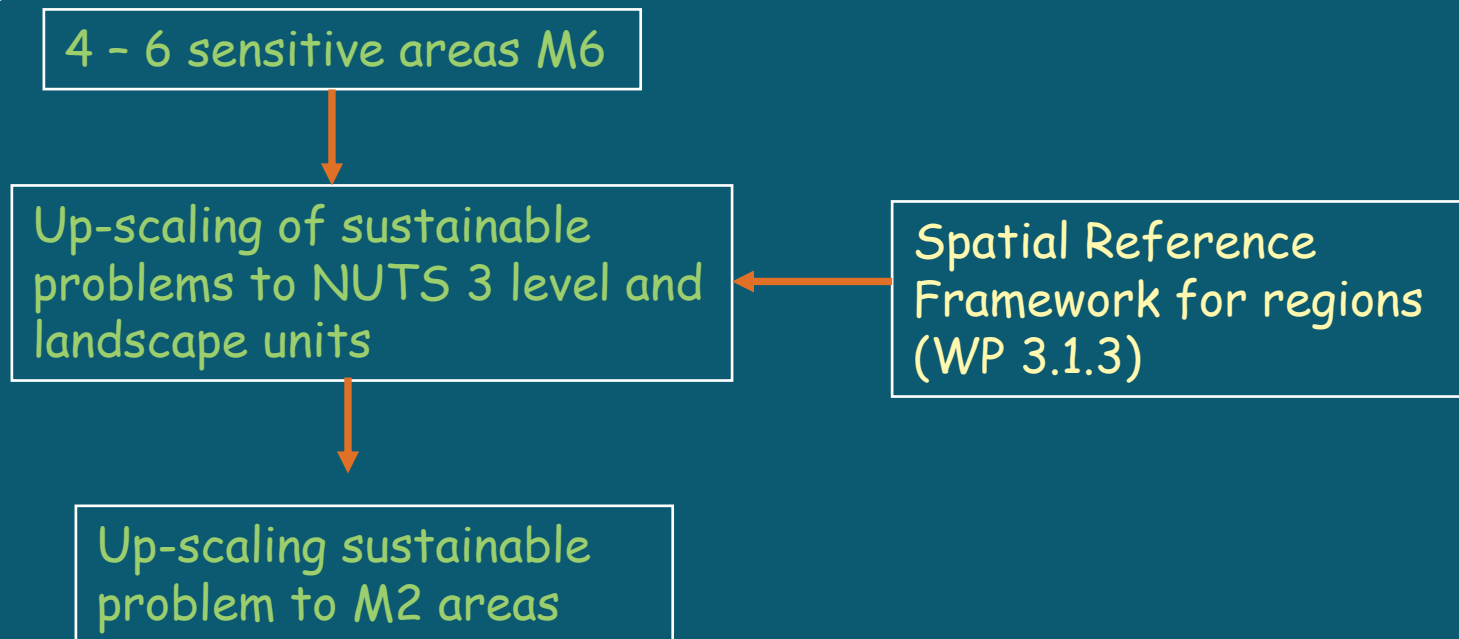

Horizontal Approach: Example Policy

Objective: Create an horizontal database for Protected Areas and Spatial Planning

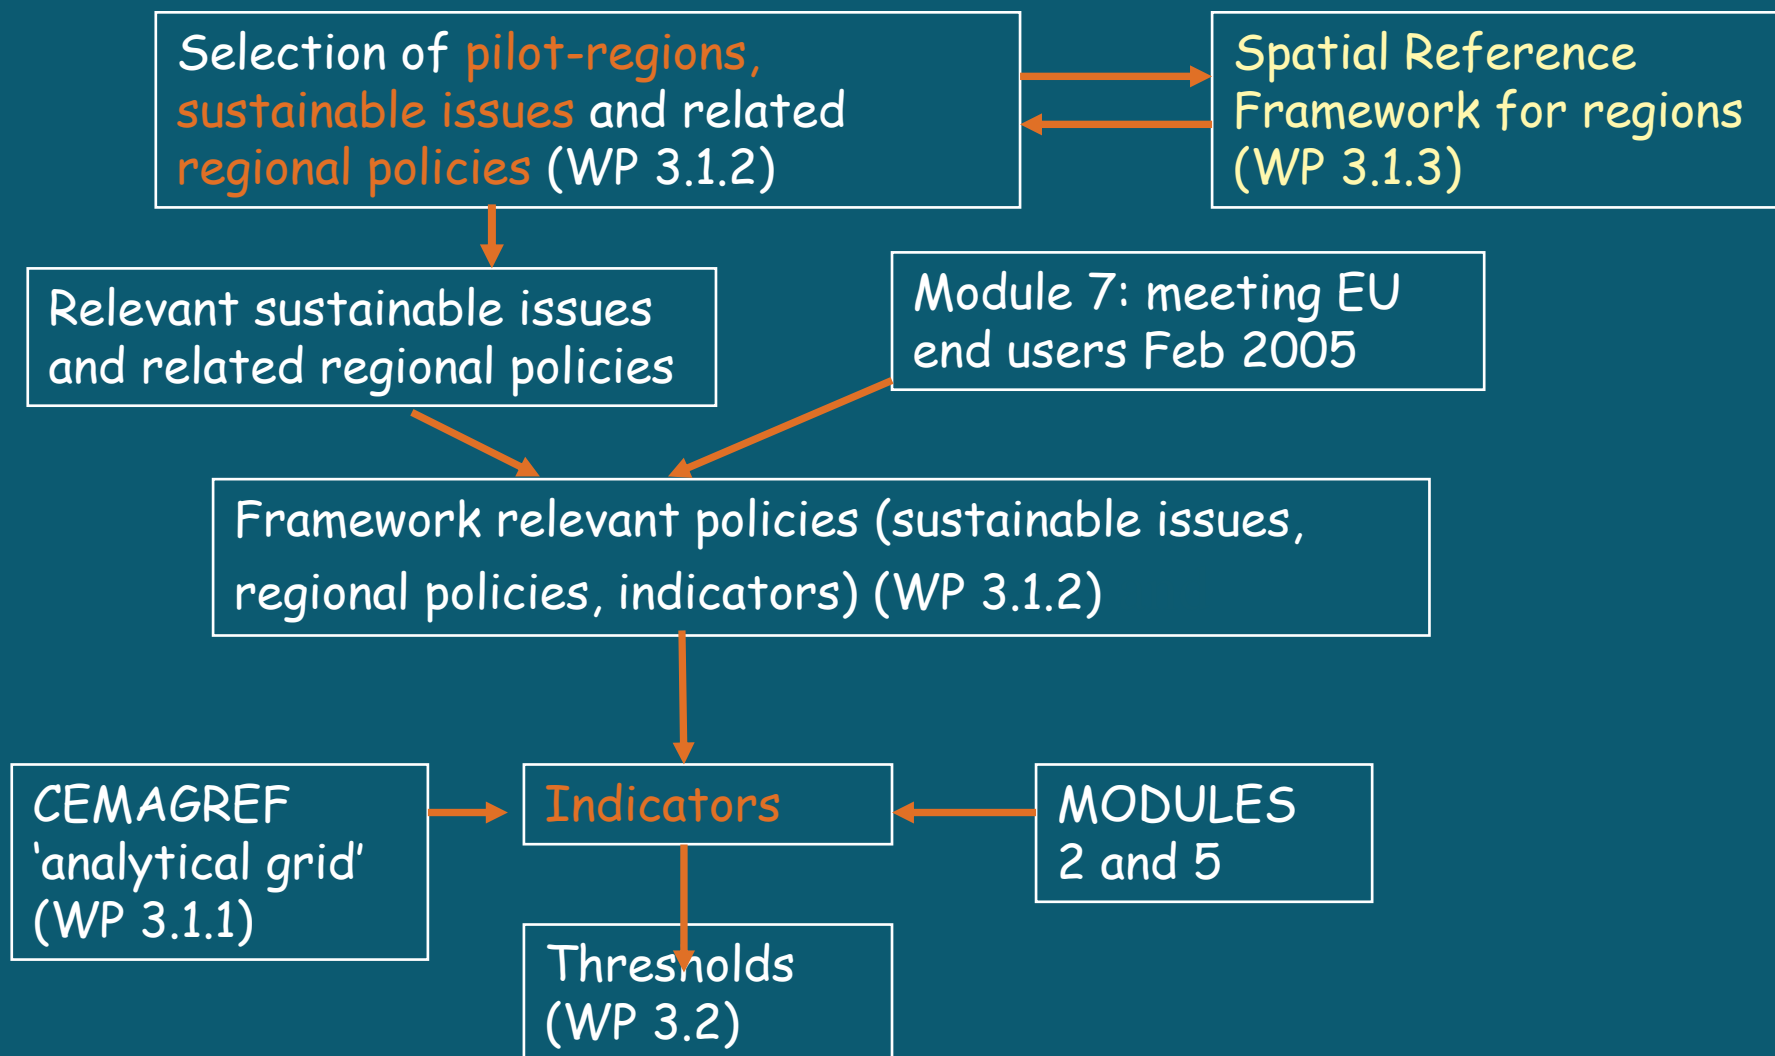

Bottom-up approach

Objective: To up-scale the sustainable problems of sensitive areas (M6) to NUTS 3 level and landscape units in order to test the results of M2 and M6
